The way **IT** works

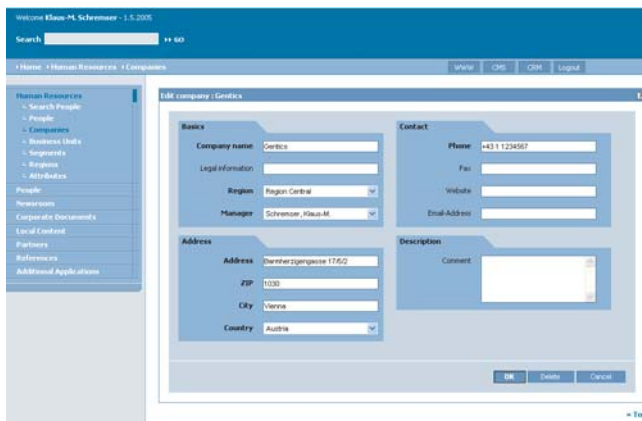

## Gentics Portal.Node® - Enterprise Portal Server

Personalised, interactive and protected portals are central access points to business-relevant information for customers, partners and employees. Thus, a future-oriented company - a corporate group and a SME likewise - has a need for efficient information systems. These systems have to be adaptive to individual needs, in order to successfully compete in every day's marketplace.

### more Flexibility

Gentics Portal.Node® is a fully-fledged, scalable and flexible portal and community solution tool. The software provides you with modules, as well as the necessary means for extensions.

*Provide information faster  
Communicate more efficiently  
Interact more securely*

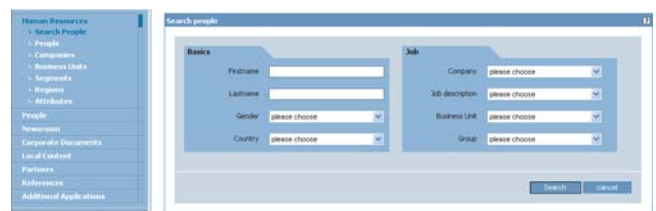

### more TIME

**Gentics Portal.Node®** is a basis for illustrating your business processes.

The modular design, the user-friendly layout of web-based interfaces, and the easy implementation of document-based applications allow for a fast and low priced realisation of plain company websites as well as complex, personalised and interactive portals.

- » Quickly deployable, modular J2EE Portal framework
- » Easy project implementation by interface composition with CMS System
- » Extensive modular equipment for intranet and community portals (forums, calendar, directory, ...)
- » Development environment for portlet-based web applications
- » Extensive API and standard support

### more Interactivity

**Gentics Portal.Node®** is the basis for personalised, interactive and protected web-based platforms of your company. With a dynamic and target group-oriented design, internet, intranet & extranet websites are consolidated; thus synergies of the contents and opportunities for optimizations can be seized.

## System architecture

**Gentics** offers you maximum flexibility, capacity and investment safety with the use of the Gentics .Node® products.

**Gentics Portal.Node®** is based on JAVA/J2EE technology and relies on open standards both in relation to the product itself and also the programming interfaces.

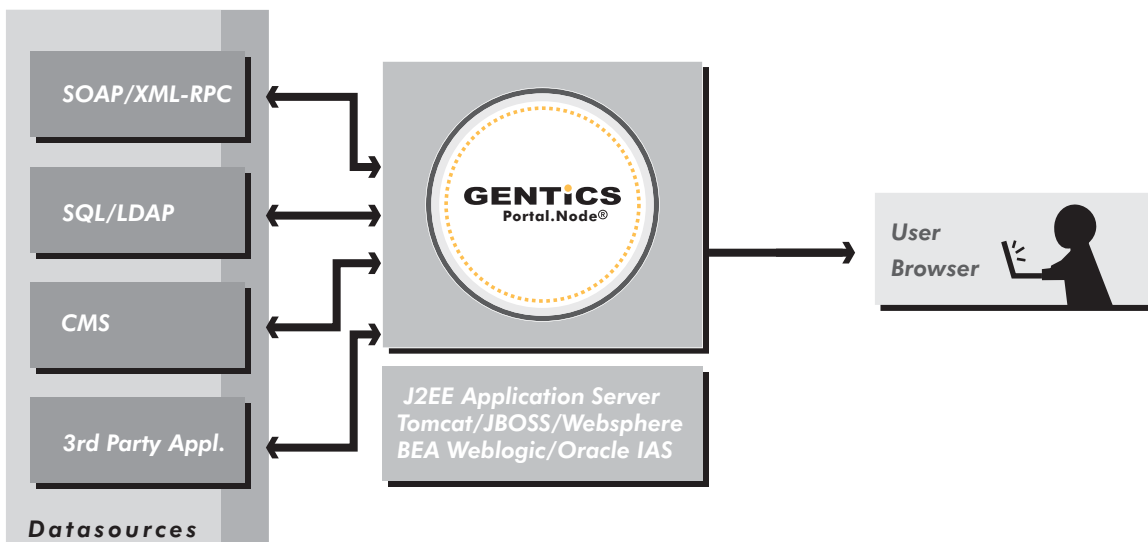

Thanks to its modularity, the system lives up to the highest requirements regarding scalability - by small and medium enterprises, corporate groups as well as agencies and Application Service Providers (ASP).

**Gentics Portal.Node®** can be used both as a standalone or ASP solution. In high traffic surroundings several servers may be connected in order to outbalance the load.

## System specification

- » **Technology**  
JAVA/J2EE
- » **Operating system**  
Unix/Windows
- » **Application server**  
Apache Tomcat/JBOSS/Webshere/Weblogic
- » **Databases and interfaces**  
JDBCS (MySQL, Oracle, DB2, SQL Server, ...)  
Webservices (SOAP/XML-RPC)  
LDAP  
Module interfaces for further connectors
- » **Standards**  
Portletstandard (JSR 168, WSRP)  
Repository Standard (JSR 170 Draft)
- » **Authentication and authorisation**  
SQL/LDAP  
Third Party Authentication (CA-Siteminder, ...)
